Education

Punjab University

Bachelor in Business and Information Technology   2021 - 2025

A multidisciplinary program combining core concepts of business management and modern information technology to prepare graduates for tech-driven business environments.

Projects

CVFork   April 2025

Full-stack CV builder app with export (PDF) functionality. Allows users to input, manage, and preview CV sections dynamically. Integrated backend using PHP for form submission and storage.

https://cvfork.me

FormFork   May 2025

SaaS platform for creating and embedding custom forms. Features include real-time submission storage, email alerts, filters, and bulk actions. Backend APIs developed with PHP and secured with sessions.

https://formfork.tech/

Plaza Management System   March 2025

Built a responsive plaza management app using React.js, Tailwind CSS, and Axios with features like unit handling, tenant/owner registration, payments, and reports. Focused on clean UI, real-time updates, and smooth admin/accountant workflows.

Devkit Tools   August 2025

A full-stack web application featuring over 70 client-side developer utilities using Next.js, React, TypeScript, and Tailwind CSS. Engineered a performance-optimized, privacy-first platform where all data processing occurs in the browser. Designed and built a responsive UI with ShadCN components and a secure admin dashboard for comprehensive content and tool management.
